Toronto, ON | 437-214-2297 | zukhriddinsh@gmail.com | linkedin.com/in/zuhriddinsh | zucksharof.onrender.com

EDUCATION

Centennial College

Sept 2024 – Dec 2027

AI & Software Engineering Technology

Toronto, ON

Relevant Coursework: Supervised Learning, AI Systems Design, AI Software Testing, Data Structures & Algorithms, OOP, Networking & Intelligent Robotics, Advanced Database Concepts, Web App Development, Linux, SDLC

WORK EXPERIENCE

AI Training Contractor, Mercor

Remote | May 2026 – June 2026

- Performed structured evaluation of LLM outputs across reasoning, coding, and instruction-following tasks, assessing model reliability and identifying failure modes to improve alignment for leading AI labs

Software Consultant Intern, KPMG

Toronto, ON | Jan 2026 – Apr 2026

- Developed Python automation scripts using NumPy and scikit-learn, cutting recurring manual processing from ~10 hours to near-zero for 90+ consultants
- Built and maintained Oracle SQL stored procedures for an internal pricing tool, enabling 30+ consultants to query and evaluate deal profitability directly from the database
- Integrated SharePoint and internal KPMG REST APIs to automate data exchange workflows between systems, replacing manual file transfers across ~120 engagements
- Created Power BI dashboards connected to SQL data sources covering 5 years of advisory deals to surface workflow and pipeline metrics for internal reporting

Marketing Associate, Quatermaster

Toronto, ON | Apr 2025 – Dec 2025

- Collaborated with the software team to triage and report product bugs via Slack; supported a team of 11, helped drive a 15% homeowner-to-user conversion across the GTA

TECHNICAL PROFICIENCY

Programming: Python, Java, C++, C#, JavaScript, TypeScript, SQL, PL/SQL, NoSQL, HTML/CSS, Bash, Linux

Agentic & ML: LangChain, LangGraph, CrewAI, FAISS, LlamaIndex, MCP, RAG, scikit-learn, TensorFlow, PyTorch, NLTK, Pandas, NumPy

Web & Frameworks: Flask, React, Node.js, Next.js, Express, MERN, Streamlit, Tailwind CSS, Bootstrap, REST APIs

Tools & Platforms: AWS, Azure, Kubernetes, Docker, GitHub, GitHub Actions, PostgreSQL, Redis, Jira, Apache Airflow, Power Platform, Vector DBs

Practices: Agentic AI, AI Guardrails, MLOps, CI/CD, DevOps, Agile, SDLC, Systems Design, Microservices

PROJECTS

Shopdesc.ai – Agentic Product Copywriting Pipeline | *Python, TypeScript, LangChain, Docker, GitHub Actions*

- Built an agentic multi-agent pipeline that automates e-commerce product copywriting, replacing a 15–30 min manual process (\$5–\$25/listing) with marketplace-ready output in under 30 seconds
- Designed agentic orchestration across four specialized agents (product analysis, SEO strategy, competitor research, copywriting), each operating autonomously with structured output passing and tool-calling integration
- Containerized a scalable multi-service architecture with Docker Compose and automated builds, tests, and PR checks via a GitHub Actions CI/CD pipeline

Cosmetics Multi-Agent RAG System | *LangChain, LangGraph, FAISS, Streamlit*

- Built an autonomous multi-agent reasoning system (Planner, Reflection, Summarization, Validation) backed by a retrieval pipeline over open-source cosmetic and health product data with evaluation and guardrails for output quality
- Used LLaMA 3.3 via Groq for inference, FAISS as the vector database for semantic retrieval, and Flask for API serving

YouTube Comments Spam Detector | *scikit-learn, NLTK, Python*

- Built a spam/ham classifier in scikit-learn and NLTK using a Multinomial Naive Bayes model with Bag-of-Words features and TF-IDF weighting; evaluated with accuracy (87%), precision, recall, and confusion matrix analysis

Rezolved – IT Support Ticket Management System | *MERN, Docker, GitHub Actions*

- Built frontend and backend on the MERN stack with Git-based code reviews; configured Docker + GitHub Actions CI/CD for automated builds, Jest unit tests, and deployments
- Implemented Firebase Google sign-in and JWT-based authentication for signup/signin flows
