Work Experience

Software Consultant Intern

Jan 2026 – Apr 2026

KPMG

Toronto, ON

- Assisted in the testing and quality assurance processes to ensure that developed solutions meet client specifications and industry standards
- Designed and developed a multi-agent system to resolve team miscommunications, enabling coworkers to verify information with agents and reduce deal losses
- Leveraged agentic artificial intelligence with Power Automate and n8n workflows, increasing productivity by 40% and driving successful deal closures and new opportunity generation
- Introduced reports using PowerBI and Excel for internal workflow analysis and optimization of the processes
- Contributed to development of an internal pricing tool, allowing consultants to evaluate deal profitability

Software Engineer Expert

May 2026 – Present

Mercor

Remote

- Evaluating and ranking LLM outputs across reasoning, coding, and instruction-following tasks to improve model alignment for leading AI labs

Education

Software Engineering and AI

Sept 2024 – December 2027

Centennial College

Toronto, ON

- **Courses:** OOP, AI Systems Design, Supervised Learning, AI Soft Test & MLOps, DSA, Networking & Intelligent Robotics, Advanced Database Concepts, Linux, Programming (1,2), Web App Dev, SDLC

Technical Proficiency

Programming: Python, Java, C#, JavaScript, TypeScript, SQL, HTML/CSS, Linux Bash Script, Socket Prog.

Libraries & Frameworks: Streamlit, Pandas, NumPy, Scikit-learn, NLTK, TensorFlow, PyTorch, Matplotlib, LangChain, LangGraph, React, Node.js, Express, MERN, Tailwind CSS, Bootstrap, PostgreSQL, RAG

Developer Tools & Platforms: AWS, GitHub, Docker, Firebase, Vercel, Render, Github Actions, LucidChart

Processes & Other Skills: Agile, Systems Design, SDLC, Jira, DevOps, RestAPI, Power Platforms, VectorDBs

Projects

Shoptesc.ai | [GitHub Link](#)

- Solving the problem of slow, expensive manual product copywriting, where each listing can take 15 to 30 minutes to write and \$5 to \$25 to outsource
- Designing a multi-agent AI workflow in Python and Docker to automate product analysis, SEO strategy, competitor research, and copywriting, producing marketplace-ready content in under 30 seconds per product
- Designed and built a scalable multi-service architecture containerized with Docker Compose and automated with a GitHub Actions CI/CD pipeline that enforced builds on every PR, enabling independent development

Banking System Simulator | [GitHub Link](#)

- Developed event handlers, created 3 types of accounts, where user has a functionality of purchase, payment and it also calculates interest rates and transaction fees using C#
- Managed the team of 4 peers, assisted on decoupling the application making it easy for future scalability

Cosmetics Multi-agent System | [GitHub Link](#)

- Implemented Streamlit for frontend that exposes simple chat interface for querying cosmetics knowledge base, leveraged llama-3.3 for inferencing using Groq and used FAISS as a vector database
- Developed a multi-agent system that consists of Planner (Orchestration), Reflection, Summarization, Validation Agents and a RAG system that has open-source data on cosmetic and health products
- Built a systems design of the multi-agent system that showcases the system flow and built diagrams that explicitly break down the workflows and show how the Planner orchestrates the agentic system

Zuhriddin (Zuck) Sharofiddinov

Toronto, ON | 437-214-2297 | zukhriddinsh@gmail.com | [linkedin.com/in/zukhriddinsh/](https://www.linkedin.com/in/zukhriddinsh/) | [Github](#) | [Website](#)

YouTube Comments Spam Detector | [GitHub Link](#)

- Built a comments spam detector using scikit-learn, NLTK and NumPy that classifies spam or ham comments using Multinomial Naïve Bayes Classifier, Bag of Words for feature extraction and TF-IDF for feature weighting
- Ran the model and got the test accuracy of 87%, effectively capturing spam indicators

Rezolved – IT Support Ticket Management System | [Rezolved Live App](#)

- Developed frontend and backend features using MERN stack, leveraging Git for version control and code reviews
- Inspected the entire ticket submission flow and debugged CRUD operations using MongoDB to check the data
- Configured CI/CD pipelines with Docker and GitHub Actions to automate builds, unit tests with Jest, and deployments over a 3-month span
- Implemented Firebase signup option for users to login using Google account and JWT token for signup/signin

Additional Experience

Marketing Associate Quartermaster Inc.

**April 2025 – December 2025
Toronto, ON**

- Collaborated with the software team on product bugs and reported them on Slack for a resolution
- Contributed to the conversion of 15% of GTA (homeowner to product user), helped with account setups and assisted in leading the team of 11 members in achieving KPIs
- In 5 months, collected 400+ referrals from homeowners on home service professionals they used
